Features:

MPS spool bolts are forged from carbon steel with either a single or double integral washer upset at the insulator end. They are used for side-of-pole installation when supporting neutral conductors and secondary service wires. The double upset type provides 1-5/8" clearance between insulator and pole. These spool bolts have 5/8" rolled threads and all associated hardware is furnished complete as illustrated.

- The J0101, J101 or J151 insulator must be ordered separately.

Material:

- Hot Dip Galvanized
